

Revision History

Version	Revision Date	Summary of Changes: Author
1.0	06-01-2020	InitialDocumentation :Sarah Reitsma
1.1	07-14-2020	Migrated into LucidChart
1.2	07-14-2020	Added FNL10_PreviousInteractions; updated 2-ANI-PoneLookup, Added in Tech Notes on Pages 2, 8, 9: Mark Stallings
1.3	07-16-2020	Added States: Sherry Luoma

DENOTES BARGE IN OFF!

Special Message Basics

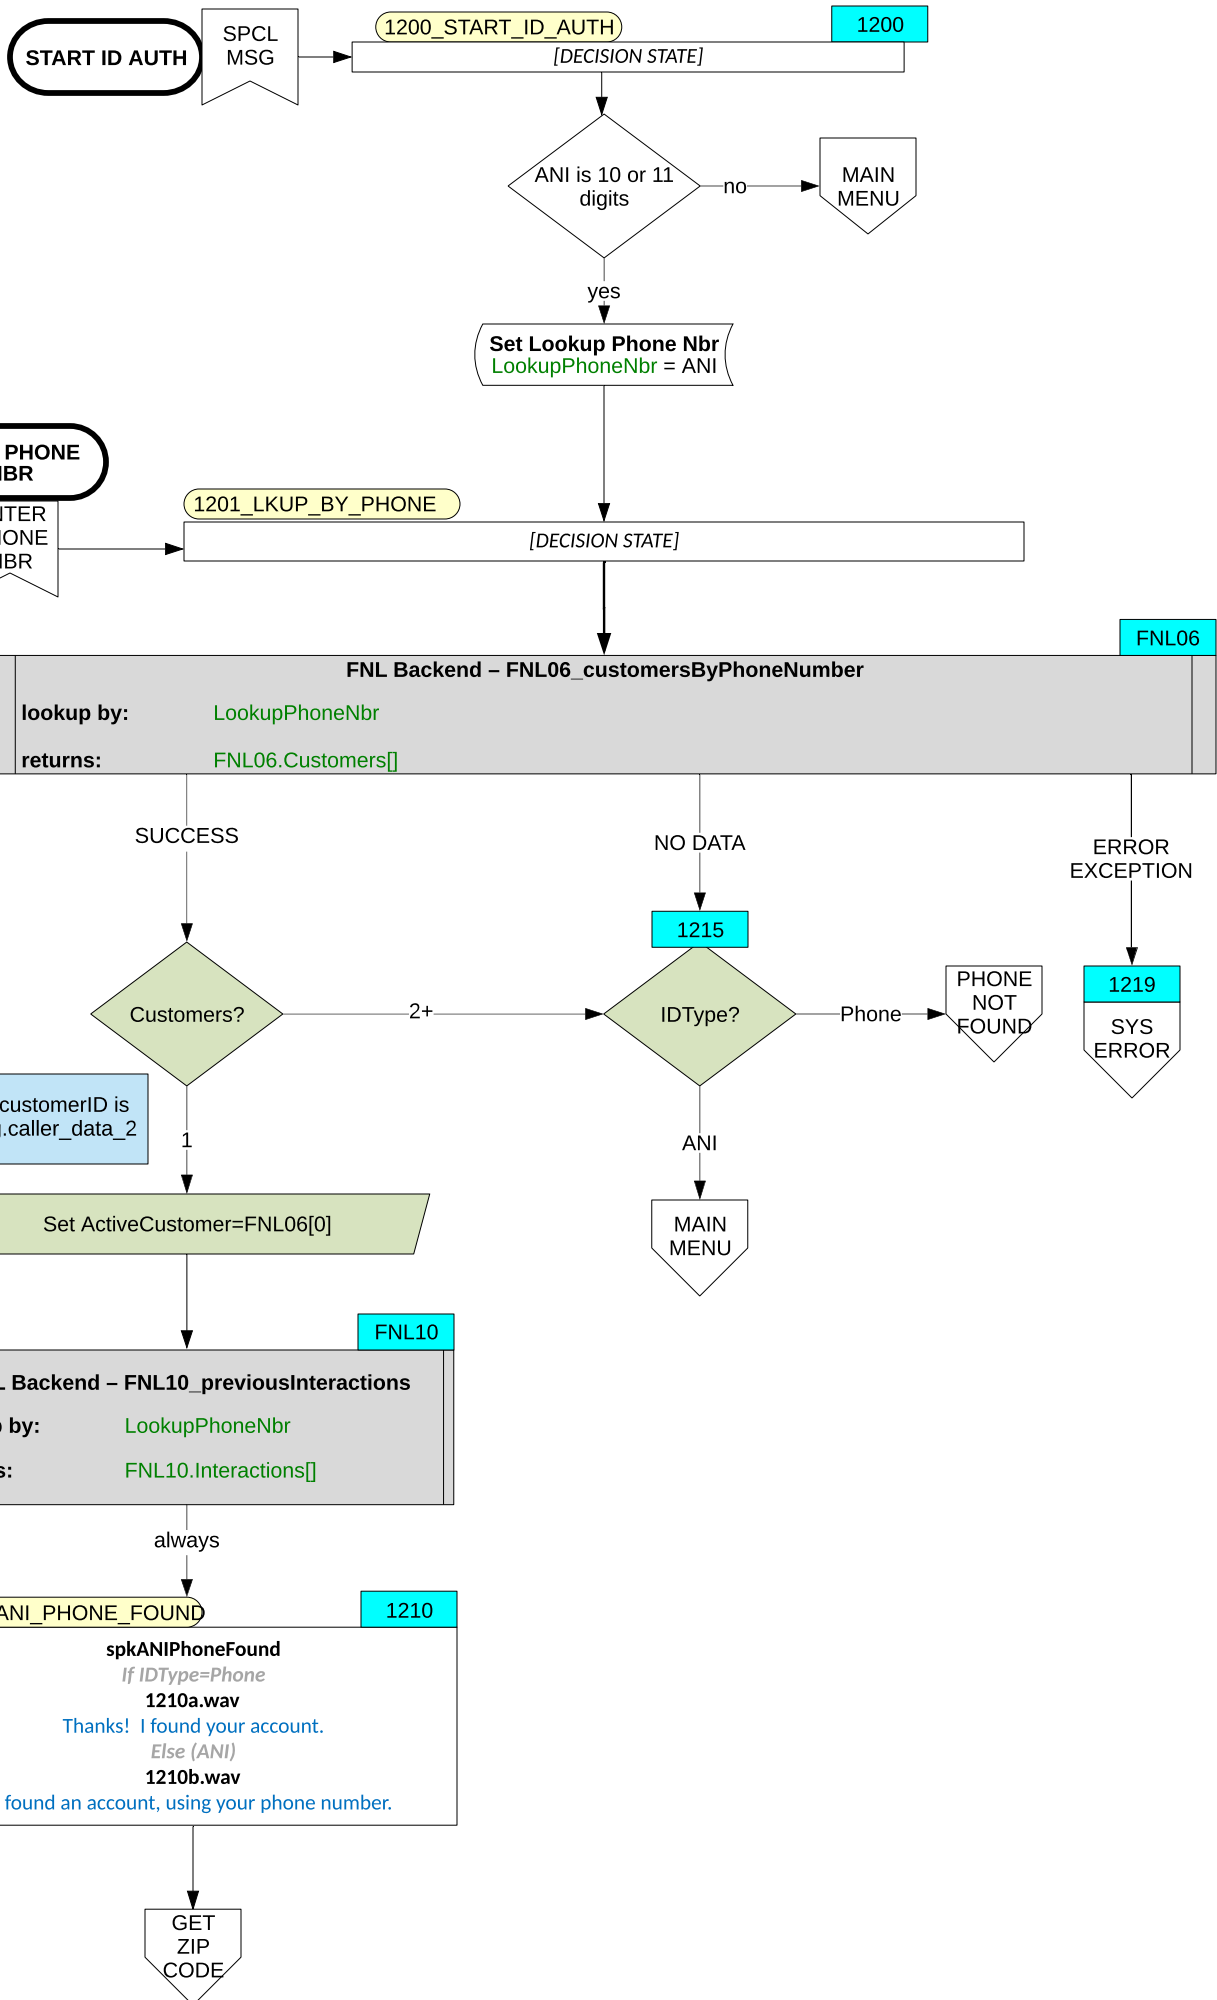

Special Messages are configurable via the WebAdmin at a Business Unit level

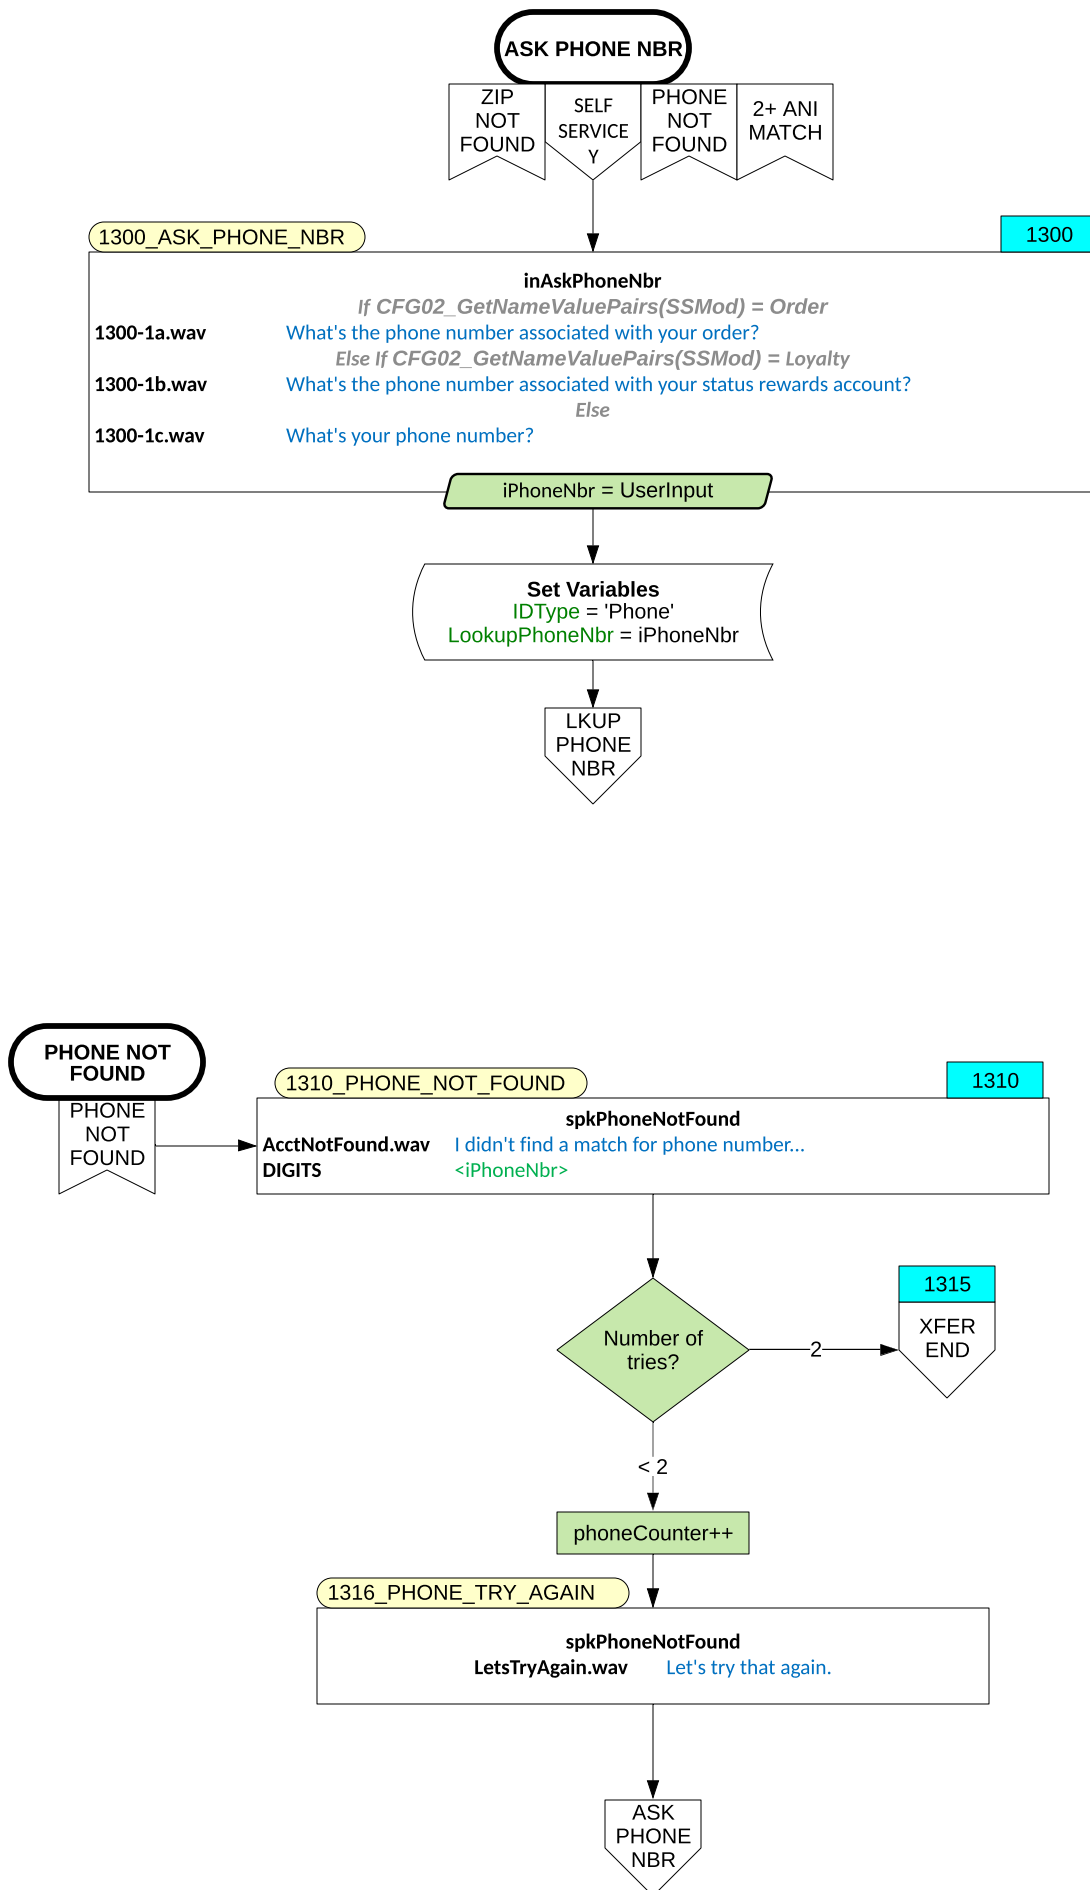

SLOT_NAME: Identifies where in the application flow the message is played (i.e. "CALL_START")

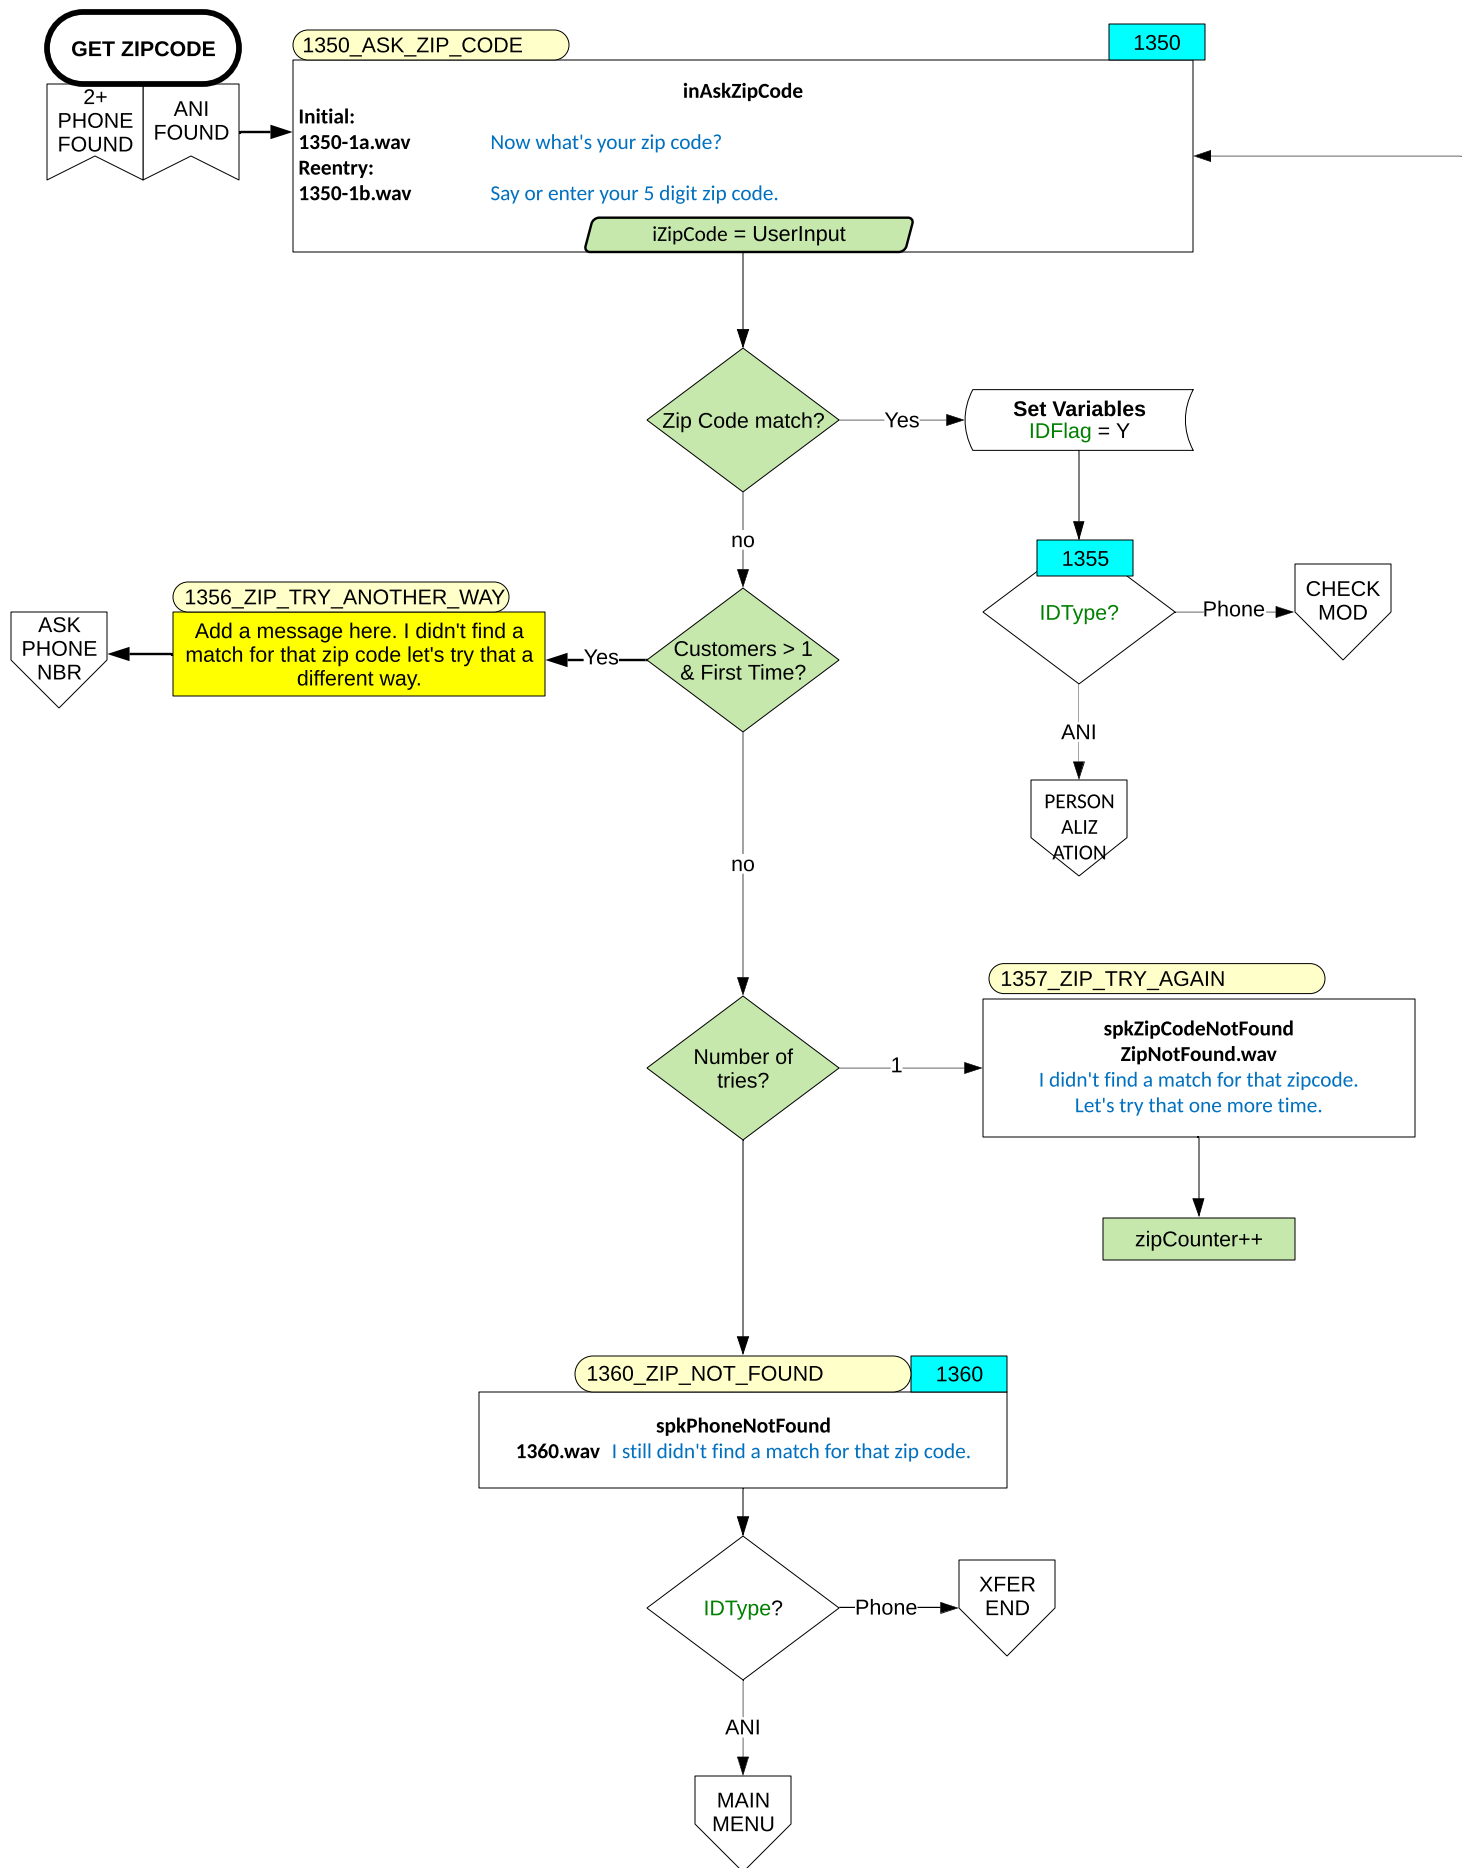

BUSINESS_UNIT: Identifies which business unit the message is associated to

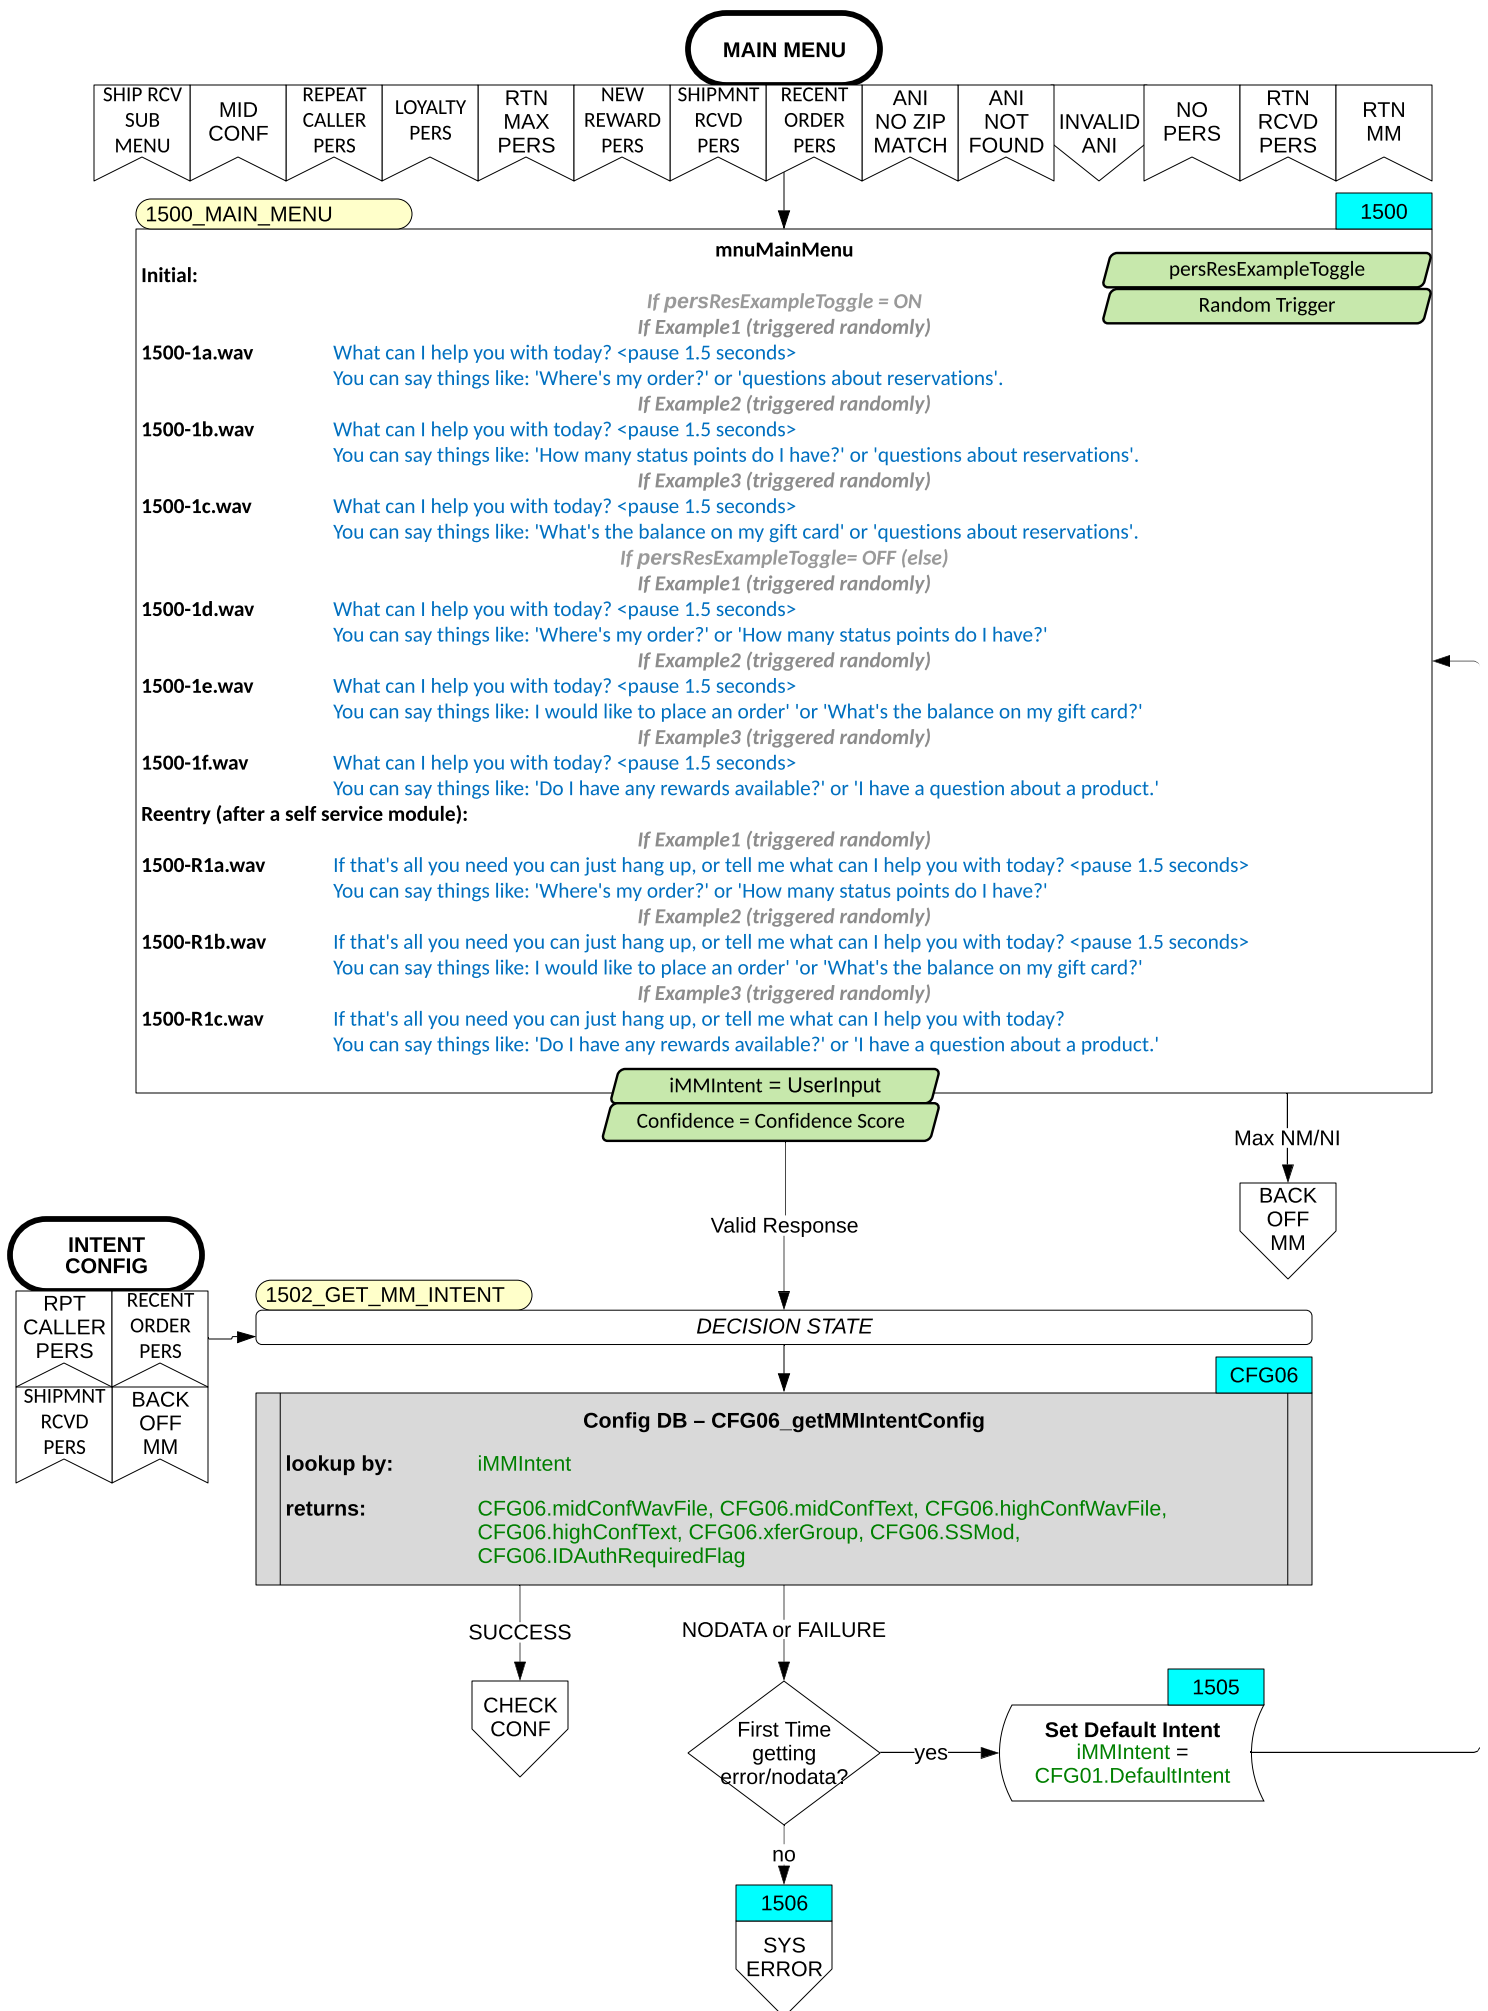

SCHEDULE: START and END DATE during which the message should play (date ranges cannot overlap – only one active at a time)

BARGE_IN: determines if the caller can key past the message, or if they must listen to it.

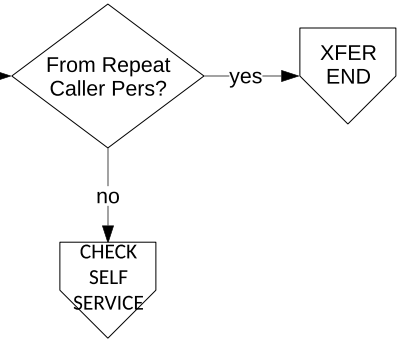

Comment (from Sherry):
Not clear on what the Confidence should be set to.
Now, I have it being set to the confidence score of the initiating input.
That gets evaluated to Mid/High - I was not clear and will be required.
Confidence = Confidence Score

None
(Lkup only)

1510_MID_CONFIRMATION

1510

mnuMidConfConfirmation
VoiceFile
<CFG06.midConfWavFile>
i.e. You want order status is that right?
If not found use midConfText via TTS Voice

yes

no
